Simulation assignment

T1(2, 0.5), T2(3, 1.2), T3(6, 0.5)

1. What is the utilization factor of the system and what is the value for $U_{rm}(3)$

$U=0.7410$ and $U_{rm}=0.779$

$U < U_{rm}$, so feasible

2. What is the minimum/maximum/average response time of all tasks?

Response time(min,max,avg)=> Task1: 0.5

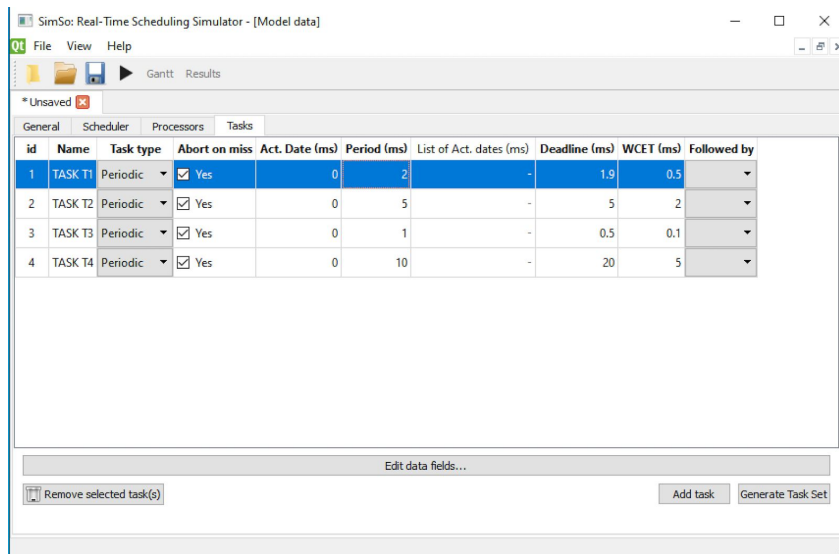

Task2: 1.7

Task3: 2.7

3. Is any task missing the deadline? Which task? Where?

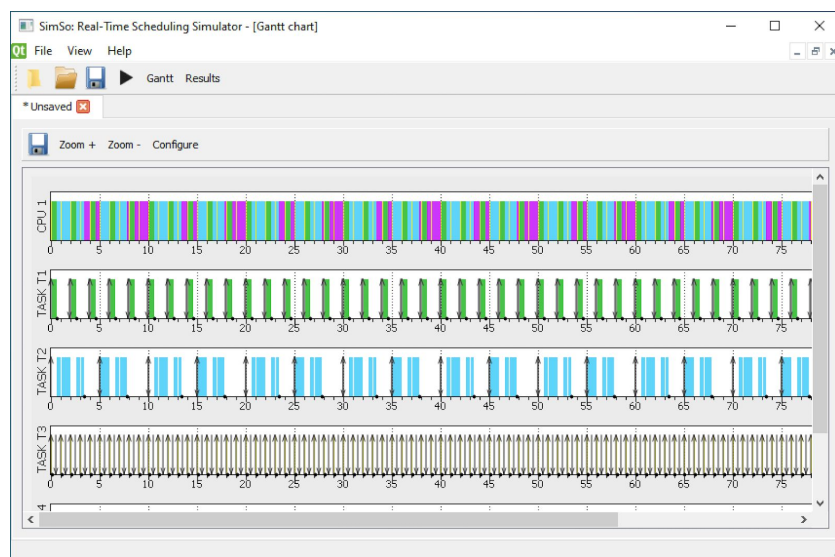

No.

The screenshot shows the 'Tasks' tab of the SimSo: Real-Time Scheduling Simulator. It contains a table with 10 columns: id, Name, Task type, Abort on miss, Act. Date (ms), Period (ms), List of Act. dates (ms), Deadline (ms), WCET (ms), and Followed by. There are four tasks listed: TASK T1, TASK T2, TASK T3, and TASK T4. All tasks are periodic and have 'Abort on miss' set to 'Yes'. The 'Act. Date' for all tasks is 0. The 'Period' values are 2, 5, 1, and 10 respectively. The 'Deadline' values are 1.9, 5, 0.5, and 20 respectively. The 'WCET' values are 0.5, 2, 0.1, and 5 respectively. The 'Followed by' column is empty for all tasks.

1. What is the utilization factor of the system and what is the value for $U_{rm}(3)$

$U=1.00$ and U_{rm} verification not applicable in EDF Scheduler.

2. What is the minimum/maximum/average response time of all tasks?

Response time=> Task1: min=0.6, max=0.6, avg=0.6

Task2: min=2.8, max=3.4, avg=3.1

Task3: min=0.1, max=0.1, avg=0.1

Task4: min=20, max=20, avg=20

3. Is any task missing the deadline? Which task? Where?

Yes. Task4

At $t=30, 40, 50, 60, 70, 80, 90, 100$

4. If a deadline is missed, could it be avoided by changing the scheduler?

No. Because the CPU is 100% used.
